Sukano makes its debut at Fakuma 2024, showcasing technical expertise and innovative products across Consumer Durables, Building & Construction, Healthcare, and Packaging. At their booth, you'll see firsthand how their functional and color masterbatches and compounds excel in real-world applications, spanning from polyesters and biopolymers to engineering polymers and high-performance polymers.

With over 35 years of experience in Packaging, Sukano is a leader in developing recyclable and circular solutions that significantly reduce CO2 emissions. Discover Sukano's innovative masterbatches for recycled PET milk bottles, which enhance processability and deliver high optical barrier properties to offer the same shelf-life as virgin PET. Learn about their NIR-detectable formulations, listed under the COTREP protocol, for high-quality optical sorting of food trays. Explore how PET plastic waste is given a second life by combining ocean-bound plastics with tailor-made masterbatches for a sustainable material alternative for consumer products.

Sukano is also entering the world of high-performance polymers, collaborating closely with customers to develop highly specialized and customized masterbatches and compounds for polysulfones and other durable, temperature- and chemical-resistant materials in their in-house laboratory.

Additionally, the recent acquisition of the Hungarian compounder Kays Kft. broadens the Sukano Group's capabilities in technical compounding with recycled polymers, allowing them to expand their existing portfolio to compounds based on polymers like ABS, PC-ABS, PC, and other engineering polymers.

Step by at Hall A4, Booth 4218 to explore how Sukano's expertise can drive innovation in your applications.
